

Wilo-FA Pump Kitting Program

New Program to Cut Lead Time, Simplify Process for Replacement Parts

The program features two types of standard “kits” for both oiled and oil-less motors, the Power Kit and the Hydraulic Kit, for select FA pumps ranging from 2.8 to 25 horsepower. The program will enable local authorized distributors to configure complete pumps within as little as 24 hours.

The Power Kit features the pump motor and necessary cables, while the Hydraulic Kit features a volute kit, suction cover (if applicable) and an impeller kit which includes a full-size, unbalanced impeller for the distributor to trim and balance per the customer’s specifications.

For full details on the kit contents, pricing and availability, please contact your Wilo Representative.
