Siamo a vostra disposizione in tutto il mondo.

Fin dal 1872 Wilo sviluppa da idee astratte nuove soluzioni concrete che diventano il riferimento tecnologico del settore. Il fondatore dell'azienda, Louis Opländer, con la sua attività nello sviluppo di impianti di distillazione cercò nuove soluzioni nella movimentazione dell'acqua e il trasferimento del calore. Il risultato dei suoi studi fu un enorme successo che portò nel 1928 il figlio Wilhelm Opländer alla progettazione e alla produzione del primo acceleratore per impianti di riscaldamento che ne rivoluzionò la tecnica impiantistica.

Nel 2001 "Wilo-Stratos" è stata la prima pompa a rotore bagnato ad alta efficienza. Oggi "Wilo-SiBoost Smart" il primo booster equipaggiato con elettropompe multistadio e motori elettrici trifase a magneti permanenti, suggerisce nuovi parametri di efficienza energetica anche per gli impianti di pressurizzazione idrica. Wilo mantiene anche oggi la sua attitudine alla ricerca, proponendo servizi e soluzioni all'avanguardia.

Oggi WILO SE è una società Europea, con sede a Dortmund, ed è un'azienda leader nel mondo per la produzione di pompe e sistemi di pompaggio per tutte le applicazioni. Con 16 siti produttivi, più di 60 filiali e circa 7.500 dipendenti, Wilo è presente in oltre 70 paesi nel mondo. L'obiettivo principale dell'azienda è soddisfare ogni giorno e in modo professionale le richieste dei clienti, fornendo loro soluzioni su misura, prodotti affidabili ad alta efficienza e servizi innovativi per la gestione degli impianti più complessi. Wilo è il partner di riferimento in tutti i segmenti di mercato quali: "Building Services", "Industry" e "Water Management".

Wilo propone una gamma completa di prodotti per tutte le applicazioni in impianti di: riscaldamento, condizionamento, refrigerazione, pressurizzazione idrica, drenaggio e fognatura, dal più piccolo circolatore per le abitazioni monofamiliari ai grandi sistemi per il raffreddamento dell'acqua nelle centrali elettriche.

È questo ciò che intendiamo con **Pioneering for You.**

Qualità, alta efficienza, sicurezza per il futuro

Le nostre prestazioni per i progettisti

Wilo ha l'obiettivo di accompagnare il progettista nella sua attività quotidiana, di supportarlo in modo mirato nella sua professione. Assistenza tecnica, supporto alla selezione e alla scelta, innovazione tecnologica ed elevatissimi standard di qualità, contribuiscono alla realizzazione dei Vostri progetti.

Wilo si propone come unico partner per la realizzazione dei Vostri progetti in impianti per l'alimentazione idrica e lo smaltimento delle acque reflue. Scegliete la qualità di Wilo, per tutte le applicazioni, la nostra proposta di sistemi per installazioni speciali, come ad esempio impianti di pressurizzazione per aree isolate senza collegamento alla rete idrica pubblica, impianti di sollevamento delle acque reflue in aree agricole isolate o con alti livelli dell'acqua freatica.

La nostra offerta di prodotti è strutturata in modo chiaro e sistematico, proponiamo pompe e sistemi completi o soluzioni modulari e personalizzate, per soddisfare le esigenze specifiche dei Vostri progetti.

Per Wilo efficienza e sostenibilità non sono solo slogan, ma obiettivi dichiarati. Le nostre pompe soddisfano i massimi valori di efficienza, i nostri standard produttivi prevedono la massima affidabilità.

Offrite ai vostri clienti soluzioni a lungo termine, che si distinguono per la loro affidabilità e sicurezza di funzionamento.

Riscaldamento, condizionamento e refrigerazione

Wilo-VeroLine IP-E

Pompa singola a motore ventilato regolata elettronicamente

Per impianti di riscaldamento, condizionamento e refrigerazione commerciali ed industriali.

Esecuzione

Pompe singole complete di trasduttore di pressione differenziale

Efficienza

Motore elettrico in classe di efficienza IE4

Idraulica

Idraulica ad alta efficienza Indice MEI 0,4

Per maggiori informazioni sui prodotti:
www.wilo.it

Focus

- Efficienza idraulica $MEI=0,4$
(secondo Direttiva ErP Regolamento CE n.547/2012)
- Efficienza motore IE4 (secondo IEC TS 60034-31 Ed.1)

Vantaggi

- Campo di regolazione fino a tre volte maggiore delle pompe tradizionali regolate elettronicamente
- Con le interfacce seriali WILO-IF si integra con qualsiasi sistema di automazione degli edifici (BMS)

In evidenza

Il display LCD di grandi dimensioni permette di visualizzare rapidamente i dati di SET della pompa.

Tecnologia

La tecnologia 'pulsante rosso' rende la regolazione e l'installazione della pompa semplice e rapida.

Installazione

I moduli WILO-IF permettono la connessione a tutte le reti di Building Management System.

Wilo-VeroTwin DP-E

Pompa gemellare a motore ventilato regolata elettronicamente

Per impianti di riscaldamento, condizionamento e refrigerazione commerciali ed industriali.

Esecuzione

Pompe gemellari complete di trasduttore di pressione differenziale in esecuzione standard pronte per funzionamento MASTER/SLAVE

Efficienza

Motore elettrico in classe di efficienza IE4

Idraulica

Idraulica ad alta efficienza Indice MEI 0,4

Per maggiori informazioni sui prodotti:
www.wilo.it

Focus

- Efficienza idraulica $MEI=0,4$
(secondo Direttiva ErP Regolamento CE n.547/2012)
- Efficienza motore IE4 (secondo IEC TS 60034-31 Ed.1)

Vantaggi

- Campo di regolazione fino a tre volte maggiore delle pompe tradizionali regolate elettronicamente
- Con le interfacce seriali WILO-IF si integra con qualsiasi sistema di automazione degli edifici (BMS)

In evidenza

Il display LCD di grandi dimensioni permette di visualizzare rapidamente i dati di SET della pompa.

Tecnologia

La tecnologia 'pulsante rosso' rende la regolazione e l'installazione della pompa semplice e rapida.

Installazione

I moduli WILO-IF permettono la connessione a tutte le reti di Building Management System.

Equipaggiamento/funzionamento

Modi di funzionamento

- Δp -c per pressione differenziale costante
- Δp -v per pressione differenziale variabile
- Controllo PID
- Funzionamento come servomotore ($n = \text{costante}$)

Livello di comando

- Pulsante rosso e display

Funzioni manuali

- Impostazione pompa on/off
- Impostazione del modo funzionamento
- Configurazione di tutti i parametri di esercizio
- Impostazione del numero di giri

Funzioni di comando esterne

- Ingresso di comando "prioritario Off"
- Ingresso di comando "scambio pompa" (solo con funzionamento a pompa doppia)
- Ingresso analogico per funzionamento come servomotore (DDC) e regolazione a distanza del valore di consegna:
 - 0–10 V
 - 2–10 V
 - 0–20 mA
 - 4–20 mA
- Ingresso analogico per segnale diretto dal sensore di pressione:
 - 0–10 V
 - 2–10 V
 - 0–20 mA
 - 4–20 m

Funzioni di segnalazione e visualizzazione

- Segnalazione cumulativa di blocco SSM
- Segnalazione cumulativa di funzionamento SBM

Scambio dati

- Porta di comunicazione a infrarossi per lo scambio dati senza fili con monitor IR o WILO-IR STICK
- Vano per innesto di moduli IF Wilo (Modbus, BACnet, CAN, PLR, LON) per interfaccia al sistema di automazione degli edifici (BMS)

Funzioni di sicurezza

- Protezione integrale del motore con elettronica di sgancio integrata
- Blocco accesso (regolazione)

Management pompa doppia (1 pompa gemellare)

- Funzionamento principale/di riserva scambio pompa dopo 24 ore di funzionamento (o eventuale anomalia ad una pompa)
- Funzione pompa doppia (somma di portata) punto di funzionamento ottimizzato al migliore rendimento

Opzioni

- Versione ...-R1 senza trasduttore di pressione differenziale
- Variante ...-H5 con corpo PN16
- Variante ...-S1/-S2 con tenuta meccanica speciale

Accessori

- 3 mensole con materiale di fissaggio per montaggio a basamento
- Monitor IR, WILO-IR STICK
- Modulo IF PLR per collegamento a PLR/convertitore porta di comunicazione
- Modulo IF LON per collegamento alla rete LONWORKS
- Modulo IF BACnet
- Modulo IF Modbus
- Modulo IF CAN

Wilo-CronoLine IL-E

Pompa singola a motore ventilato regolata elettronicamente

Per impianti di riscaldamento, condizionamento e refrigerazione commerciali ed industriali.

Esecuzione

Pompe singole complete di trasduttore di pressione differenziale

Efficienza

Motore elettrico normalizzato in classe di efficienza IE4 con accoppiamento con giunto rigido in esecuzione 2 e 4 poli

Idraulica

Pompa con lanterna e giunto rigido per accoppiamento con motore normalizzato, tenuta meccanica standard.

Per maggiori informazioni sui prodotti:
www.wilo.it

Focus

- Efficienza idraulica $MEI > 0,4$
(secondo Direttiva ErP Regolamento CE n.547/2012)
- Efficienza motore IE4 (secondo IEC TS 60034-31 Ed.1)

Vantaggi

- Campo di regolazione fino a tre volte maggiore delle pompe tradizionali regolate elettronicamente
- Con le interfacce seriali WILO-IF si integra con qualsiasi sistema di automazione degli edifici (BMS)

In evidenza

Il display LCD di grandi dimensioni permette di visualizzare rapidamente i dati di SET della pompa.

Tecnologia

La tecnologia 'pulsante rosso' rende la regolazione e l'installazione della pompa semplice e rapida.

Installazione

I moduli WILO-IF permettono la connessione a tutte le reti di Building Management System.

Range upgrade

Wilo-CronoLine-IL-E, efficace

Chiave di lettura

Esempio	IL-E 50/170-7,5/2-R1
IL-E	Pompa inline con regolazione elettronica
50	Diametro nominale DN della bocca
170	Diametro nominale della girante
7,5	Potenza nominale del motore P ₂ in kW
2	Numero poli
R1	Versione senza sensore di pressione

Particolarità/vantaggi del prodotto

- Motore elettrico IE4
- Risparmio energetico grazie alla regolazione della velocità integrata
- WILO-Moduli-IF opzionale per l'integrazione in sistemi di building automation
- Tecnologia del pulsante rosso e display per un semplice utilizzo
- Management integrato (2 pompe singole)
- Protezione integrale del motore

Dati tecnici	
Indice di efficienza minimo (MEI)	≥ 0,4
Fluidi consentiti (altri fluidi su richiesta)	
Acqua riscaldamento (secondo VDI 2035)	Si
Miscela acqua/glicole (con 20-40 % vol. di glicole e temperatura fluido ≤ 40 °C)	Si
Acqua fredda e refrigerata	Si
Olio diatermico	Versione speciale
Campo d'applicazione consentito	
Campo di temperatura con una temperatura ambiente max. di +40 °C	-20...+140 °C (a seconda del fluido di pompaggio)
Pressione nominale PN	13 bar (fino a +140 °C) 16 bar (fino a +120 °C)
Alimentazione elettrica	
Alimentazione rete	3~440V ±10%, 50/60 Hz 3~400V ±10%, 50/60 Hz 3~380V -5%/+10%, 50/60 Hz

Dati tecnici	
Motore/elettronica	
Indice di efficienza motore elettrico	IE4
Protezione integrale del motore	Si
Grado protezione	IP 55
Classe isolamento	F
Emissione disturbi	EN 61800-3
Immunità	EN 61800-3
Materiali	
Corpo pompa	EN-GJL-250
Lanterna	EN-GJL-250
Girante	EN-GJL-200
Girante (versione speciale)	G-CuSn10
Albero della pompa	1.4122
Tenuta meccanica	AQEGG
Altre tenute meccaniche	su richiesta

Equipaggiamento/funzionamento

Modi di funzionamento

- Δp -c per pressione differenziale costante
- Δp -v per pressione differenziale variabile
- Controllo PID
- Funzionamento come servomotore (n = costante)

Livello di comando

- Pulsante rosso e display

Funzioni manuali

- Impostazione pompa on/off
- Impostazione del modo funzionamento
- Configurazione di tutti i parametri di esercizio
- Impostazione del numero di giri
-

Funzioni di comando esterne

- Ingresso di comando "prioritario Off"
- Ingresso di comando "scambio pompa"
(solo con funzionamento a pompa doppia)
- Ingresso analogico per funzionamento come servomotore (DDC) e regolazione a distanza del valore di consegna:
 - 0-10 V
 - 2-10 V
 - 0-20 mA
 - 4-20 mA
- Ingresso analogico per segnale diretto dal sensore di pressione:
 - 0-10 V
 - 2-10 V
 - 0-20 mA
 - 4-20 m

Funzioni di segnalazione e visualizzazione

- Segnalazione cumulativa di blocco SSM
- Segnalazione cumulativa di funzionamento SBM

Scambio dati

- Porta di comunicazione a infrarossi per lo scambio dati senza fili con monitor IR o WILO-IR STICK
- Vano per innesto di moduli IF Wilo (Modbus, BACnet, CAN, PLR, LON) per interfaccia al sistema di automazione degli edifici (BMS)
-

Funzioni di sicurezza

- Protezione integrale del motore con elettronica di sgancio integrata
- Blocco accesso (regolazione)

Management pompa doppia (2 pompe singole)

- Funzionamento principale/di riserva scambio pompa dopo 24 ore di funzionamento (o eventuale anomalia ad una pompa)
- Funzione pompa doppia (somma di portata) punto di funzionamento ottimizzato al migliore rendimento

Opzioni

- Versione ...-R1 senza trasduttore di pressione differenziale
- Variante ...-S1/-S2 con tenuta meccanica speciale

Accessori

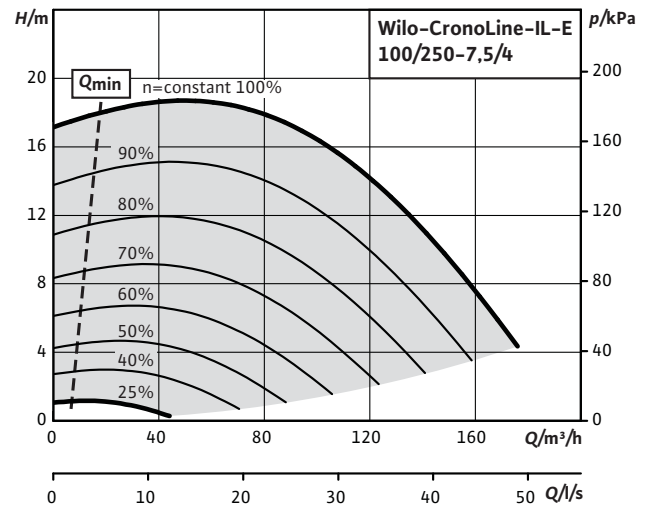

- 3 mensole con materiale di fissaggio per montaggio a basamento
- Monitor IR, WILO-IR STICK
- Modulo IF PLR per collegamento a PLR/convertitore porta di comunicazione
- Modulo IF LON per collegamento alla rete LONWORKS
- Modulo IF BACnet
- Modulo IF Modbus
- Modulo IF CAN
- Quadri elettrici di controllo VR-HVAC
- Quadri elettrici di controllo CCe-HVAC
- Quadri elettrici di controllo SCe-HVAC
- Trasduttore differenza di pressione (DDG)

Riscaldamento, condizionamento e refrigerazione

Wilo-CronoTwin DL-E

Pompa gemellare a motore ventilato regolata elettronicamente

Per impianti di riscaldamento, condizionamento e refrigerazione commerciali ed industriali.

Esecuzione

Pompe gemellari complete di trasduttore di pressione differenziale

Efficienza

Motore elettrico normalizzato in classe di efficienza IE4 con accoppiamento con giunto rigido in esecuzione 2 e 4 poli

Idraulica

Pompa con lanterna e giunto rigido per accoppiamento con motore normalizzato, tenuta meccanica standard.

Per maggiori informazioni sui prodotti:
www.wilo.it

Focus

- Efficienza idraulica $MEI > 0,4$
(secondo Direttiva ErP Regolamento CE n.547/2012)
- Efficienza motore IE4 (secondo IEC TS 60034-31 Ed.1)

Vantaggi

- Campo di regolazione fino a tre volte maggiore delle pompe tradizionali regolate elettronicamente
- Con le interfacce seriali WILO-IF si integra con qualsiasi sistema di automazione degli edifici (BMS)

In evidenza

Il display LCD di grandi dimensioni permette di visualizzare rapidamente i dati di SET della pompa.

Tecnologia

La tecnologia 'pulsante rosso' rende la regolazione e l'installazione della pompa semplice e rapida.

Installazione

I moduli WILO-IF permettono la connessione a tutte le reti di Building Management System.

Modifica della serie

Wilo-CronoTwin-DL-E, efficace

Chiave di lettura

Esempio	DL-E 50/170-7,5/2-R1
DL-E	Pompa doppia inline con regolazione elettronica
50	Diametro nominale DN della bocca
170	Diametro nominale della girante
7,5	Potenza nominale del motore P ₂ in kW
2	Numero poli
R1	Versione senza sensore di pressione

Particolarità/vantaggi del prodotto

- Motore elettrico IE4
- Risparmio energetico grazie alla regolazione della velocità integrata
- WILO-Moduli-IF opzionale per l'integrazione in sistemi di building automation
- Tecnologia del pulsante rosso e display per un semplice utilizzo
- Management integrato pompa doppia
- Protezione integrale del motore

Dati tecnici	
Indice di efficienza minimo (MEI)	≥ 0,4
Fluidi consentiti (altri fluidi su richiesta)	
Acqua riscaldamento (secondo VDI 2035)	Si
Miscela acqua/glicole (con 20-40 % vol. di glicole e temperatura fluido ≤ 40 °C)	Si
Acqua fredda e refrigerata	Si
Olio diatermico	Versione speciale
Campo d'applicazione consentito	
Campo di temperatura con una temperatura ambiente max. di +40 °C	-20...+140 °C (a seconda del fluido di pompaggio)
Pressione nominale PN	13 bar (fino a +140 °C) 16 bar (fino a +120 °C)
Alimentazione elettrica	
Alimentazione rete	3~440V ±10%, 50/60 Hz 3~400V ±10%, 50/60 Hz 3~380V -5%/+10%, 50/60 Hz

Dati tecnici	
Motore/elettronica	
Indice di efficienza motore elettrico	IE4
Protezione integrale del motore	Si
Grado protezione	IP 55
Classe isolamento	F
Emissione disturbi	EN 61800-3
Immunità	EN 61800-3
Materiali	
Corpo pompa	EN-GJL-250
Lanterna	EN-GJL-250
Girante	EN-GJL-200
Girante (versione speciale)	G-CuSn10
Albero della pompa	1.4122
Tenuta meccanica	AQEGG
Altre tenute meccaniche	su richiesta

Equipaggiamento/funzionamento

Modi di funzionamento

- Δp -c per pressione differenziale costante
- Δp -v per pressione differenziale variabile
- Controllo PID
- Funzionamento come servomotore (n = costante)

Livello di comando

- Pulsante rosso e display

Funzioni manuali

- Impostazione pompa on/off
- Impostazione del modo funzionamento
- Configurazione di tutti i parametri di esercizio
- Impostazione del numero di giri
-

Funzioni di comando esterne

- Ingresso di comando "prioritario Off"
- Ingresso di comando "scambio pompa" (solo con funzionamento a pompa doppia)
- Ingresso analogico per funzionamento come servomotore (DDC) e regolazione a distanza del valore di consegna:
 - 0-10 V
 - 2-10 V
 - 0-20 mA
 - 4-20 mA
- Ingresso analogico per segnale diretto dal sensore di pressione:
 - 0-10 V
 - 2-10 V
 - 0-20 mA
 - 4-20 m

Funzioni di segnalazione e visualizzazione

- Segnalazione cumulativa di blocco SSM
- Segnalazione cumulativa di funzionamento SBM

Scambio dati

- Porta di comunicazione a infrarossi per lo scambio dati senza fili con monitor IR o WILO-IR STICK
- Vano per innesto di moduli IF Wilo (Modbus, BACnet, CAN, PLR, LON) per interfaccia al sistema di automazione degli edifici (BMS)
-

Funzioni di sicurezza

- Protezione integrale del motore con elettronica di sgancio integrata
- Blocco accesso (regolazione)

Management pompa doppia (1 pompa gemellare)

- Funzionamento principale/di riserva scambio pompa dopo 24 ore di funzionamento (o eventuale anomalia ad una pompa)
- Funzione pompa doppia (somma di portata) punto di funzionamento ottimizzato al migliore rendimento

Opzioni

- Versione ...-R1 senza trasduttore di pressione differenziale
- Variante ...-S1/-S2 con tenuta meccanica speciale

Accessori

- 3 mensole con materiale di fissaggio per montaggio a basamento
- Monitor IR, WILO-IR STICK
- Modulo IF PLR per collegamento a PLR/convertitore porta di comunicazione
- Modulo IF LON per collegamento alla rete LONWORKS
- Modulo IF BACnet
- Modulo IF Modbus
- Modulo IF CAN
- Quadri elettrici di controllo VR-HVAC
- Quadri elettrici di controllo CCe-HVAC
- Quadri elettrici di controllo SCe-HVAC
- Trasduttore differenza di pressione (DDG)

Moduli

Funzioni di comando e segnalazione.

Per realizzare in maniera sempre ottimale il collegamento ai diversi sistemi di automazione degli edifici sulla base dei requisiti di oggi e del futuro, Wilo offre per tutte le pompe elettroniche moduli di interfaccia da innestare nella pompa, uno per ogni motore elettrico in funzione del protocollo di comunicazione della rete di automazione.

IF-BACnet

Comunicazione seriale, digitale BACnet MS/TP
Protocollo di comunicazione "RS485".

- Trasferimento dati per il controllo e la gestione della pompa:
 - Modo di regolazione
 - Valore di consegna prevalenza/numero di giri
 - Pompa On/Off
- Trasferimento dati per le segnalazioni di stato della pompa:
 - Valore reale prevalenza
 - Valore reale consumo di energia
 - Valore reale potenza
 - Valore reale corrente motore
 - Ore di esercizio
 - Valore reale, numero di giri
 - Informazioni dettagliate sui blocchi
 - Informazioni di stato

IF-CAN

Comunicazione seriale, digitale CAN bus
Protocollo di comunicazione "CAN"

- Trasferimento dati per il controllo e la gestione della pompa:
 - Modo di regolazione
 - Valore di consegna prevalenza/numero di giri
 - Pompa On/Off
- Trasferimento dati per le segnalazioni di stato della pompa:
 - Valore reale prevalenza
 - Valore reale consumo di energia
 - Valore reale potenza
 - Valore reale corrente motore
 - Ore di esercizio
 - Valore reale, numero di giri
 - Informazioni dettagliate sui blocchi
 - Informazioni di stato

IF-Modbus

Comunicazione seriale, digitale Modbus RTU
Protocollo di comunicazione "RS485".

- Trasferimento dati per il controllo e la gestione della pompa:
 - Modo di regolazione
 - Valore di consegna prevalenza/numero di giri
 - Pompa On/Off
- Trasferimento dati per le segnalazioni di stato della pompa:
 - Valore reale prevalenza
 - Valore reale consumo di energia
 - Valore reale potenza
 - Valore reale corrente motore
 - Ore di esercizio
 - Valore reale, numero di giri
 - Informazioni dettagliate sui blocchi
 - Informazioni di stato

IF-LON

Comunicazione seriale, digitale LON
Protocollo di comunicazione "LONWORKS".

- Trasferimento dati per il controllo e la gestione della pompa:
 - Modo di regolazione
 - Valore di consegna prevalenza/numero di giri
 - Pompa On/Off
 - Dati di sensori esterni
- Trasferimento dati per le segnalazioni di stato della pompa:
 - Valore reale prevalenza
 - Valore reale consumo di energia
 - Valore reale potenza
 - Valore reale corrente motore
 - Ore di esercizio
 - Valore reale, numero di giri
 - Informazioni dettagliate sui blocchi
 - Informazione di stato

IF-PLR

Comunicazione seriale, digitale PLR
Protocollo di comunicazione "WILO".

- Trasferimento dati per il controllo e la gestione della pompa:
 - Modo di regolazione
 - Valore di consegna prevalenza/numero di giri
 - Pompa On/Off
- Trasferimento dati per le segnalazioni di stato della pompa:
 - Valore reale prevalenza
 - Valore reale consumo di energia
 - Valore reale potenza
 - Valore reale corrente motore
 - Ore di esercizio
 - Valore reale, numero di giri
 - Informazioni dettagliate sui blocchi
 - Informazione di stato

Wilo-Moduli IF

L'integrazione efficace ai sistemi BMS.

I moduli IF permettono di integrare le pompe in-line a motore ventilato elettroniche Wilo-Veroline e Wilo-Cronoline in tutti i sistemi di Building Management System secondo i più diffusi parametri di comunicazione.

La gestione e il controllo della pompa grazie alle interfacce WILO-Modulo IF, è completa, dal sistema di supervisione si accede a tutti i parametri di funzionamento, si può gestire e controllare la pompa durante il suo ciclo di funzionamento.

L'integrazione nei sistemi BMS Delle pompe serie Wilo-Veroline e Wilo-Cronoline può avvenire sia in fase di installazione che successivamente, le Interfacce possono essere installate in qualsiasi momento e sono disponibili per comunicare con i più diffusi sistemi di integrazione:

- ✓ Lonworks
- ✓ Modbus
- ✓ Canbus
- ✓ Bacnet

I Moduli IF WILO rendono possibili i servizi di comunicazione e gestione, secondo gli standard previsti dalla direttiva VDI 3814.

→ Wilo-IR Stick

Applicazioni:

Il PC diventa uno strumento di servizio per pompe con il **Wilo-IR Stick**.

Gli scambi di informazioni tra le pompe Wilo e il Servizio Wilo Tool Software è fatto in modalità wireless tramite la chiavetta USB, compatibile con tutte le pompe a regolazione elettronica esistenti con interfaccia ad infrarossi.

Wilo-IR Stick

Dispositivo compatibile con tutte le porte USB che permette, grazie alla sua interfaccia ad infrarossi, la gestione e il controllo delle pompe Wilo a velocità variabile. Il suo utilizzo consente di:

Accedere a tutti i parametri di regolazione della pompa

- $\Delta P-V$
- $\Delta P-C$
- Regolazione della velocità
- Funzione Rallenty
- Visualizzazione del punto di lavoro sulla curva caratteristica
- Impostazione ciclo di scambio pompa (Master slave) per modelli gemellari Stratos-D o 2 Sstratos singoli collegati con moduli IF
- Impostazione segnalazione di tipo SSM

Accesso al registro di funzionamento dei parametri della pompa

- Consumo elettrico istantaneo e cumulativo
- Statistiche di funzionamento relative al carico di lavoro effettivo
- Temperatura del fluido
- Punto di lavoro reale sulla curva caratteristica
- Statistiche errori e anomalie
- Auto test della pompa (Modulo elettronico, Motore elettrico e Idraulica)

Report (documenti stampabili) personalizzati sullo stato di funzionamento della pompa per semplificare le operazioni di manutenzione e controllo.

Caratteristiche prestazionali			
	Apparecchio di regolazione Wilo...		
	VR-HVAC	SCe-HVAC	CCe-HVAC
Dati tecnici			
Numero pompe	1-4	1-4	1-6
Campo potenza nominale P_2	0,37-22,0 kW	0,55-22 kW	0,37-22,0 kW
Alimentazione elettrica	3 ~ 400 V, 50/60 Hz	3 ~ 400 V, 50/60 Hz	3 ~ 400 V, 50/60 Hz
Indice di protezione	IP 54	IP 54	IP 54
Temperatura ambiente consentita	da 0 °C fino a +40 °C	da 0 °C fino a +40 °C	da 0 °C fino a +40 °C
Gamma di regolazione	Analogico progressivo, 2/4-10 V preselezionabile, velocità min. pompa secondo targhetta fino a 100 %	tra 30 % e 100 % della velocità nominale del motore	Analogico progressivo, 2/4-10 V preselezionabile, velocità min. pompa secondo targhetta fino a 100 %
Modo di regolazione (descrizione vedi pagine seguenti)			
$\Delta p-c$	Si	Si	Si
$\Delta p-c$ (TA)	No	No	Si
$\Delta p-q$ (m ³ /h)	No	No	Si
$\Delta p-v$	Si	Si	Si
T_A (temperatura esterna)	No	Si (servomotore)	Si (servomotore)
$T-abs$ (temp. processo.)	No	Si (servomotore)	Si (servomotore)
T_{VL} (temperatura mandata)	No	Si (servomotore)	Si (servomotore)
T_{RL} (temperatura ritorno)	No	Si	Si
$\Delta T-c$	No	Si	Si
$\Delta T-v$	No	No	Si
Modo di servomotore (DDC)	No	Si	Si
Q-c	No	No	Si
Funzioni di comando e segnalazione			
Impostazione remota della velocità	No	0/4 - 20 mA (di serie) 0/2 - 10 V (opz. su richiesta)	0/4 - 20 mA (di serie) 0/2 - 10 V (opz. su richiesta)

Display grafico	Guidato da menù/ visualizzazione con simboli	Guidato da menù/ visualizzazione con simboli	Guidato da menù/ visualizzazione con testi e con simboli
Livello di comando	Manuale /0 / Auto	Manuale /0 / Auto	Manuale /0 / Auto
Memoria errori	9 segnalazioni	16 segnalazioni	35 segnalazioni
Scambio pompe per blocco	Si	Si	Si
Impulso avviamento pompa	Si	Si	Si
Ottimizzazione tempi di funz. /Scambio ciclico pompe	solo scambio pompe ciclico in base al tempo	Si	Si
Regolatore PID	Si	Si	Si
Contaore di servizio integrato con conteggio singolo/cumulativo	Si	Si	Si
Ottimizzazione dei periodi di funzionamento per i sistemi a più pompe	No	Si	Si
Commutazione sul secondo valore di consegna	No	Si	Si (max. 3)

Particolarità/vantaggi del prodotto

Modi di regolazione

- Regolazione costante della pressione differenziale ($\Delta p-c$)
- Regolazione variabile della pressione differenziale ($\Delta p-v$)

Gestione

- Fino a 4 pompe singole o 2 pompe gemellari
- Gestione pompa di riserva
- Funzionamento in somma di portata ed alternanza automatica delle pompe

Wilo-Sistema VR-HVAC

Tipo

→ per impianti a pompa singola e a più pompe fino a 4 pompe complessive (4 motori elettrici) es. 4 pompe singole "IP-E/IL-E" o 2 pompe gemellari "DP-E/DL-E".

→ **Le pompe devono essere tutte dello stesso modello**

→ Modo di regolazione:

- Pressione differenziale - costante ($\Delta p-c$)
- Pressione differenziale - variabile ($\Delta p-v$)

Funzioni disponibili

- Interruttore principale bloccoporta
- Regolatore PID
- Display Grafico LCD per la visualizzazione di tutti i valori e gli stati di esercizio
- Tecnologia del pulsante rosso
- LED per la segnalazione dello stato di esercizio, pompa(e) in uso, pompa(e) in blocco
- Interruttori di protezione e morsetti di uscita per l'alimentazione delle pompe
- Scambio automatico delle pompe
- Possibilità di funzionamento in emergenza
- Selezione della pompa di riserva
- Scheda segnalazioni integrata (opzionale)

Funzioni di comando e segnalazione remota

Il sistema Wilo-VR-HVAC dispone di serie di molteplici ingressi e uscite di comando:

- Uscita analogica Δp_{out} (0 - 10 VDC) per l'emissione del valore reale fornito dal trasduttore di pressione differenziale
- Contatti liberi da potenziale:
 - Inserimento/disinserimento pompa
 - Segnalazione cumulativa di blocco
 - Segnalazione cumulativa di funzionamento
 - Segnalazione singola di blocco ESM per ciascuna pompa (opzionale)
 - Segnalazione singola di funzionamento EBM (opzionale)

Principio di funzionamento

Modo di regolazione $\Delta p-c$

In regolazione $\Delta p-c$ la differenza di pressione è misurata dal sensore tra due punti dell'impianto ed è mantenuta costante al valore H impostato per la prevalenza, in tutto il campo di portata consentito.

Modo di regolazione $\Delta p-v$

In regolazione $\Delta p-c$, solo la prima pompa è regolata nel modo regolazione $\Delta p-v$, quando si accendono le altre pompe queste sono regolate nel modo regolazione $\Delta p-c$.

Descrizione Pannello di controllo

Particolarità/vantaggi del prodotto

- Comandi semplici: Display, e icone intuitive
- Cronologia stato di funzionamento (fino a 16 segnalazioni singole)
- Visualizzazione sul Display
 - Stato delle pompe e del modulo elettronico,
 - Valore set-point
- Parametri di regolazione avanzati: 2 valori di consegna impostabili, possibilità di regolazione remota del valore di consegna
- **Integrazione in sistemi BMS (opzionale):**
 - BACnet,
 - Modbus RTU(RS 232)
 - LON

Wilo-Sistema SCe-HVAC

Tipo

→ per impianti a pompa singola e a più pompe fino a 4 pompe complessive (4 motori elettrici) es. 4 pompe singole "IP-E/IL-E" o 2 pompe gemellari "DP-E/DL-E".

→ **Le pompe devono essere tutte dello stesso modello**

→ Modo di regolazione:

- Pressione costante, p-c
- Differenza di pressione costante, $\Delta p-c$
- Differenza di pressione variabile, $\Delta p-v$
- Regolatore di temperatura, $n=f(T_x)$
- Regolatore numero di giri, $n=f(\text{analogico } I_n)$
- Differenza di temperatura, costante ΔT

Funzioni disponibili

- Regolatore PID
- Contatore di servizio integrato - singolo e cumulativo
- Ottimizzazione del tempo di funzionamento
- Protezione motore mediante collegamento del contatto di protezione avvolgimento (WSK) e della segnalazione cumulativa di blocco (SSM)
- Display LCD con retroilluminazione
- Indicatore di stato (pompe e convertitori di frequenza)
- Visualizzazione definita delle informazioni sui blocchi e archiviazione nella memoria della cronologia
- Controllo interruzioni linea dei sensori (p/T...)
- Scambio automatico delle pompe
- Selezione della pompa di riserva
- Scheda segnalazioni integrata (opzionale)
- Configurazione pannello di controllo:
 - WM (montaggio a parete)
 - BM (armadio)
- Indice di protezione IP54
- Per pompe con potenza nominale di $P_2 = 1,5 - 22 \text{ kW}$

- Campo di modulazione della velocità tra il 100% e il 40% della velocità nominale del motore
- Segnali di uscita: 0 - 10 V
- Temperatura ambiente ammessa da 0 °C a +40 °C

Funzioni di comando e segnalazione remota

- Impostazione della velocità con segnale (4-20 mA)
- Impostazione del valore di consegna (4 - 20 mA)
- Contatti liberi da potenziale:
 - Inserimento/disinserimento pompa
 - Funzione antigelo tramite ingresso digitale
 - Segnalazione cumulativa di blocco
 - Segnalazione cumulativa di funzionamento
 - Commutazione sul secondo valore di consegna

Sono disponibili i seguenti ingressi e uscite di comando e controllo opzionali:

- Riarmo a distanza della segnalazione cumulativa di blocco
- Segnali individuali di funz. e blocco per pompe e convertitori
- Commutazione automatico/manuale

Particolarità/vantaggi del prodotto

- **Comandi semplici:** Display Touch-screen; con visualizzazione di testo in chiaro multilingue oppure con icone.
- **Sistema di facile utilizzo:** Memorizzazione e visualizzazione dei dati di funzionamento,
- **Sistema affidabile:** controllo dell'interruzione di linea per i sensori, salvamotore, indicazione di stato per i motori.
- **Parametri di regolazione ampliati:** 3 valori di consegna impostabili, regolazione PID.
- **Moduli opzionali per il collegamento a sistemi BMS bus:** Profibus, CANBus, Modbus RTU, LON, BACnet e altri. Possibilità di trasmissione dati remota con modem GPRS.

Wilo-Sistema CCE-HVAC

Tipo

→ per impianti a pompa singola e a più pompe fino a 6 pompe complessive (6 motori elettrici) es. 6 pompe singole "IP-E/IL-E" o 3 pompe gemellari "DP-E/DL-E".

→ **Le pompe devono essere tutte dello stesso modello**

- Modo di regolazione $\Delta p-c$; $\Delta p-v$; $\Delta p-(\pm)T$; ΔT ; P-c
 - Pressione costante, p-c
 - Differenza di pressione costante, $\Delta p-c$
 - Differenza di pressione variabile, $\Delta p-v$
 - Regolatore di temperatura, $n=f(T)$
 - Regolatore numero di giri, $n=f(\text{analogico } I_n)$
 - Regolazione della temperatura, T-c
 - Differenza di temperatura, costante $\Delta T-c$
 - Differenza di temperatura, variabile $\Delta T-v$

Funzioni disponibili

- Regolatore PID
- Orologio in tempo reale integrato con commutazione ora solare/legale
- Contatore di servizio integrato con conteggio singolo/cumulativo
- Ottimizzazione del tempo di funzionamento per gli impianti a più pompe
- Protezione motore mediante collegamento del contatto di protezione avvolgimento (WSK) e della segnalazione cumulativa di blocco (SSM)
- Display tattile (Touch-Screen) retroilluminato a colori
- Indicatore di stato (pompe e convertitori di frequenza)
- Gestione a menu orientata all'utente con visualizzazione di testo in chiaro multilingue oppure con icone
- Memorizzazione ed emissione di molteplici dati di funzionamento
- Visualizzazione definita delle informazioni sui blocchi e archiviazione nella memoria della cronologia

- Controllo interruzioni linea dei sensori (p/T...)
- Indice di protezione IP 54
- Alimentazione di rete 3~400 V, 50/60 Hz
- Per pompe con potenza nominale di $P_2 = 0,37 - 22 \text{ kW}$
- Controllo della velocità tra velocità minima e massima della pompa
- Segnali di uscita 0/2 - 10 V, 0/4 - 20 mA
- Temperatura ambiente ammessa da 0 °C a +40 °C

Funzioni di comando e segnalazione remota

- Impostazione della velocità remota (4 - 20 mA)
- Impostazione remota del valore di consegna (4 - 20 mA, opzionale 0/2 - 10 V) preselezionabile
- Contatti liberi da potenziale:
 - Inserimento/disinserimento pompa
 - Funzione antigelo tramite ingresso digitale
 - Segnalazione cumulativa di funzionamento / blocco
- Selettore di servizio "Rete - Emergenza - Esercizio"
- Commutazione sul secondo/terzo valore di consegna

Sono disponibili i seguenti ingressi e uscite di comando e controllo opzionali:

- Riarmo a distanza della segnalazione cumulativa di blocco
- Commutazione nel funzionamento come servomotore
- Segnali individuali di funz. e blocco per pompe e convertitori
- Commutazione automatico/manuale
- Moduli di interfaccia a reti di Building Management System (Can; Modbus; Lonworks)

Wilo-Select 4 online – Il consulente per le pompe

La nuova applicazione online per la vostra progettazione pompe

I vostri vantaggi:

- Impiego semplice e confortevole
- Configurazione sicura dei prodotti con calcoli idraulici
- Comparazione dei tempi di ammortamento e dei costi di gestione e del ciclo di vita in un colpo d'occhio
- Supporto ottimale per la progettazione e la consulenza ai clienti

Grazie al nuovo Wilo-Select 4 online potrete sperimentare la 4^a generazione del dimensionamento pompe – un'esperienza fatta di flessibilità, comodità, efficienza e potenza.

I dati aggiornati dei prodotti saranno sempre a vostra disposizione grazie al collegamento Internet. Semplicemente online, ovunque voi siate.

Ora la progettazione è più semplice, rapida e sicura che mai: bastano 4 passi per ottenere il prodotto suggerito o un'analisi affidabile dei costi per ciclo di vita (LCC-Check).

- Aprire l'anteprima dei costi di esercizio
- Selezionare le pompe di confronto
- Controllare le basi di calcolo
- Confrontare i costi sul ciclo di vita e i tempi di ammortamento

Grazie al confronto integrato dei costi sul ciclo di vita (LCC-Check) è possibile informarsi in modo semplice sulla convenienza delle pompe attualmente installate presso i propri clienti.

Wilo-Select 4 online calcola la pompa sostitutiva ideale e vi fornisce risultati convincenti sotto forma di potenziale di risparmio in Euro, indicando inoltre il tempo di ammortamento in un unico foglio dati.

I nuovi confronti tra prodotti rappresentano la base per la consulenza tecnica e possono essere utilizzati a sostegno delle decisioni durante il colloquio con il cliente.

Un'ulteriore novità è costituita dalla scelta degli accessori per le applicazioni per l'alimentazione idrica e per acque cariche e reflue, attraverso un'interfaccia intuitiva che consente di creare rapidamente capitolati e offerte.

Ulteriori funzioni di esportazione e l'invio diretto per e-mail dei documenti di offerta e capitolato garantiscono una comunicazione efficiente con i propri clienti.

Si consiglia di registrare un account e accedere ai prezzi di listino, le altre specifiche del mercato ed informazioni sui prodotti. Troverete anche la cartella personale del progetto per un facile back-up delle configurazioni.

Wilo App:

Il consulente per le pompe sempre a portata di mano.

Con Wilo App hai tutto il mondo delle pompe in formato tascabile.

Wilo App "Consulente Wilo" è disponibile gratuitamente, è facile da usare e contiene molte informazioni che prima erano disponibili solo su internet o documentazione cartacea. Sia nella sostituzione di una pompa che durante la visita presso il cliente il "Consulente Wilo" vi supporterà nelle attività quotidiane in modo affidabile.
